## The Company...

Air Handlers has been trading since May 1989, and has just celebrated 25 years in business in 2014. The Company operates from its 60,000 Sq Ft Factory in Salford Quays which was purpose built in year 2000.

## Product Development...

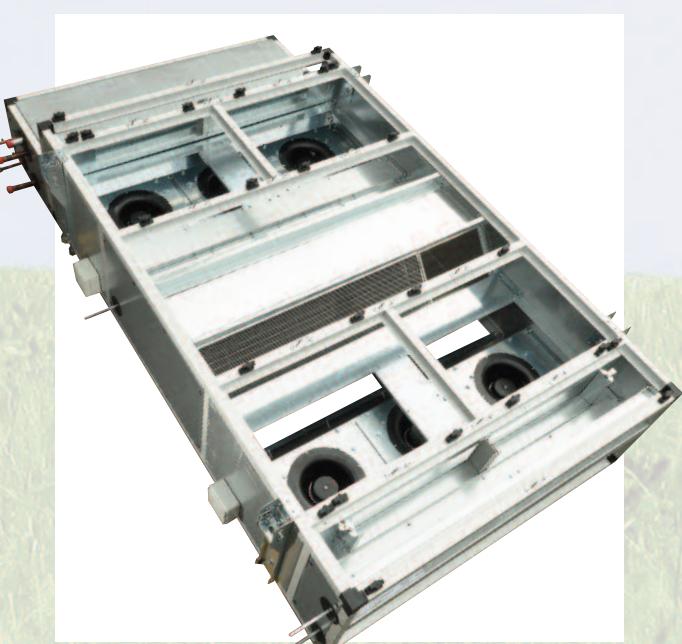

The Company is continually updating its products to comply with changing energy saving technologies, so the introduction of the PVHRU Range of low profile heat reclaim air handling units is based on changes in Fan technology, with the introduction of EC backward curved direct driven plug fans, with 0<10V speed control. Multi fan wall arrangements have been adopted to give higher performance with lower energy consumption. Our team of research professionals are committed to developing products with sustainable energy solutions to meet today's demands for reducing ventilation energy consumption.

## Compliance...

The Packaged Void Heat Reclaim Unit range has been developed to meet the specific fan power requirements of Building Regulations, BS EN 1886 Class B Construction Standards and Ecodirective ErP 2018.

## Acoustic Performance...

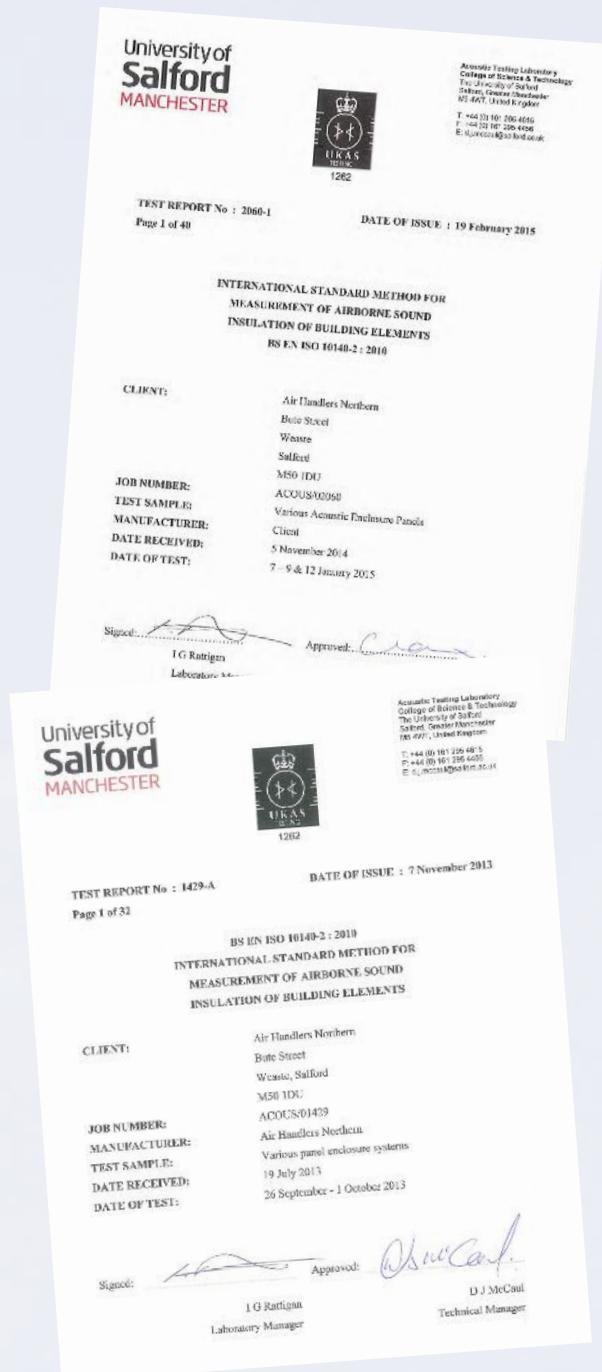

Extensive acoustic testing of casework construction has been carried out at both the companies testing facilities, and Salford University Acoustic Testing Laboratory. Acoustic tests were carried out on eleven double skin composite panel/frame systems, eight different triple and quadruple skin composite panel/frame systems, to BS. EN ISO10140-2 (2010) which have all been certified as UKAS accredited.

**University of  
Salford  
MANCHESTER**  
Acoustic Testing Laboratory  
College of Science & Technology

## Certification...

All acoustic SRI tests are certified by Salford University Test Laboratories to BS EN ISO 10140-2(2010) – Report No's 1429 & 2060.

## Location...

PVHRU Quiet Package Void Heat Reclaim Air Handling Units are normally located within the ceiling void or space below the ceiling slab, providing full fresh air with heat recovery from the exhaust air.

Packaged Void Heat Reclaim Units can be provided with a on board or remote mounted control panel with integral controls, sensors, actuators to offer a fully packaged unit.

## Construction...

### Frame

Insulated extruded anodised aluminium pentapost sections with solid die cast mechanical fit corners are used to build each frame. The frame is acoustically insulated to prevent noise leakage.

### Panels

Panels are flush fitted into the frame and air sealed with neoprene gaskets. A range of acoustically insulated panels are available to meet the sound reduction required in the classroom space.

### Side and Bottom Access

All access panels will be flush mounted in the frame, and constructed as the fixed panels. Fan and control panel access panels will be lockable. Quick release fasteners will be used on other access panels. bottom access).

### Energy Recovery

PVHRU Packaged Void Heat Recovery Units utilise counterflow plate heat exchangers. Having sealed shaped plates, with energy recovery performance to European Directives (ErP) 2018.

Offering efficiencies up to 90%, all plate exchangers are Eurovent certified, with 100% air tightness tested to EN 308.

A drain tray is provided with an in built condensate pump operated via a float switch. Face and bypass dampers, actuator operated, offer a summer by pass facility.

### Filters

Filtration is fitted to both the fresh air and return air inlets disposable G4 grade panel filters are used as standard.

Disposable cartridge panel filters can be offered as an alternative or secondary filter with grades F5, F6, F7.

Filters can be side or bottom withdrawal and arranged as pre and secondary filters.

Manometers or pressure differential switches factory fitted are available as an option.

## Cooling Coil Options

Cooling coil options are available to offer mechanical cooling, direct expansion or chilled water coils constructed from copper tubes and headers with aluminium fins as standard for coastal environment the following fin material is available

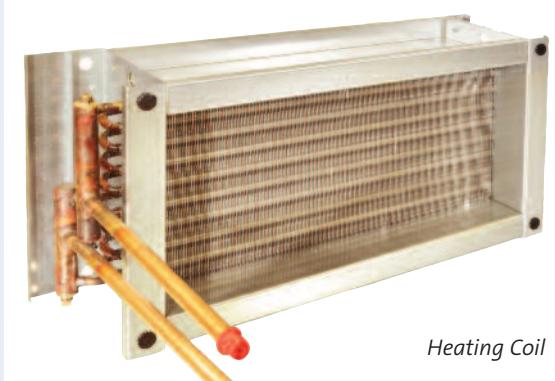

- Polyester coated aluminium
- Blygold coating
- Copper fin material

Drain trays are fitted to cooling coils with an option of natural drain connection requiring an external trapping arrangement or a condensate pump system.

## Heating Coil

Low temperature hot water heating coils are designed to be side or bottom withdrawal. Coils are constructed from copper tubes and headers with aluminium fins as standard. Other fin block constructions are available offering higher corrosion protection.

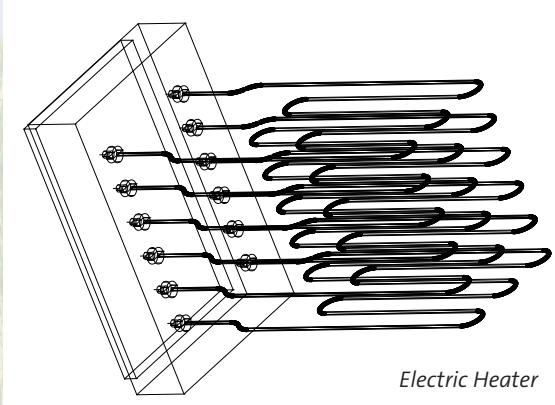

- Polyester coated aluminium
- Blygold coating
- Copper fin material

*Heating Coil*

## Electric Heaters

Manufactured with sheathed elements, and fitted with a high temperature cut out. Balanced phase elements are arranged for thyristor or step control.

*Electric Heater*

*Condensate Lift Pump*

## Dampers

All dampers are constructed from an aerofoil section double skin aluminium blade profile with edge, blade and side seals to offer low leakage.

The blade rotation is performed by rigid nylon cogs which operate out of Air Stream. The damper operating mechanism is connected to an optional factory fitted and pre-wired actuator via a square brass drive shaft.

*Face and Bypass Dampers*

## Fans

Package Void Heat Reclaim Units have supply and return air backward curved centrifugal plug type fans, direct driven by high efficiency EC motors.

This method of scroll free fan produces an optimal low loss flow of air through the impeller so there are no longer any drastic cross sectional changes.

Motors operate via a 0-10V DC output from the motor, it provides infinitely variable speed control.

Backward curved scroll free fans are quiet running with optimised airflow through the impeller, giving significantly reduced tonal noise.

## Fan Inlet Flow grids...

By fitting an inlet flow grid to the supply and extract fans, it is possible to achieve significant noise reduction from the fan.

The noise reduction is predominantly low frequency decay (i.e. 63Hz, 125Hz, 250Hz), which can help offer significant sound power loss. This sound power loss is created by the reduction in turbulence hitting the rotating blades, with tonal frequency components, known as impellor noise or tonal noise.

Tonal noise consists of the blade-passing noise and its harmonics. The frequency of the blade-passing noise can be calculated as the sum of the fan speed and the number of blades.

A flow-grid fitted to the inlet of the fans will significantly reduce the low frequency noise generated disturbance. The vortex is split when impacting the grille as it is considerably weakened when it flows through the flowgrid.

Sound pressure is reduced, particularly the low frequency. The chart below indicates the power loss on octave bands.

*Flowgrids*

Freq Hz	63	125	250	500	1K
Power loss db	-6	-10	-7.5	-8	-1

## Controls...

PVHRU Quiet Packaged Void Heat Reclaim Air Handling Units can be supplied with an optional in built control system.

### Standard Control Package

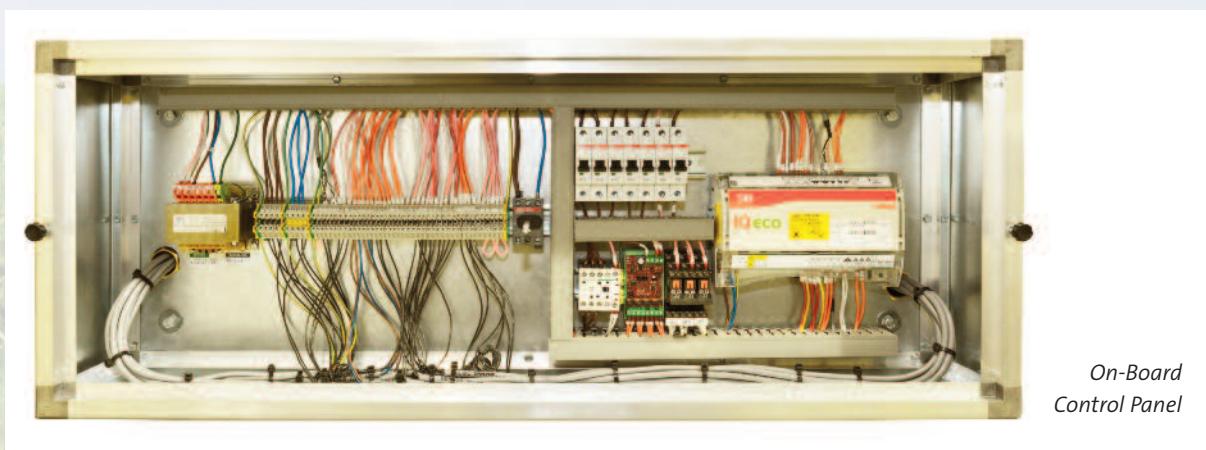

This option includes for the control panel to be built into or directly mounted on the PVHRU Quiet Unit. All internal components will be pre-wired with isolators, actuators, sensors, thermostats, pressure switches factory fitted.

The control package will incorporate a controller which contains features to act independent or with a BMS, Modbus and Bacnet facility is installed in the controller which has display features.

The control package includes speed controllers built into the control panel to speed regulate the EC fans.

Control system options:

- Control panel suitable for remote mounting and interconnecting wiring by others.
- Trend or similar controller.
- Output facility to operate remote condensing unit(s) or heat pump unit(s).
- Output to operate a thyristor controller (additional) for electric heater 0<10 Volt temperature regulation.

*On-Board Control Panel*

## Casework Class...

Packaged Void Heat Reclaim Units have various types of casework available as detailed below.

### Standard Casework

Standard Casework is constructed from a 20mm anodised aluminium framework with 18mm double skin insulated panels.

### Standard Casework Panel Options

#### Option 1 Double Skin

0.9mm Inner Skin galvanized sheet metal  
1.2mm Outer Skin galvanized sheet metal

#### Option 2 Double Skin

1.2mm Inner Skin galvanized sheet metal  
0.7mm Outer Skin plastisol plastic coated steel

### Sound Reduction Index 20/18 PB Double Skin

Frequency Hz	63	125	250	500	1K	2K	4K	8K
Power Loss db	21.0	25.9	28.2	29.3	33.1	34.5	33.7	39.8

### Acoustic Enhanced Casework

Various acoustically enhanced panels are available with different thickness and acoustic insulation composites, frames are constructed from anodised aluminium and acoustically insulated to prevent sound leakage.

All acoustic panel options are listed below with their sound reduction index.

#### Option 1 Double Skin

30mm anodised aluminium acoustic insulated frame with 25mm double skin sound barrier insulated panels.

#### Inner Skin

0.9mm inner skin galvanised sheet metal

#### Outer Skin

1.2 mm outer skin galvanised sheet metal

### Sound Reduction Index 30/25 PB Double Skin

## Accreditation...

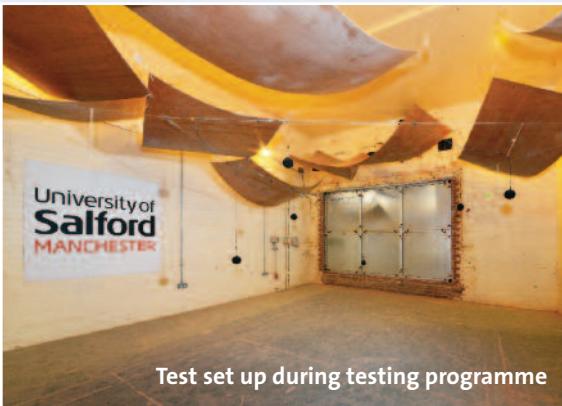

In partnership with Salford University acoustic testing laboratory a range of composite acoustic panels have been designed and tested.

To obtain the true casework noise breakout, the frame and panel assembly has to be tested with a large enough area sample to give a true representation of Packaged Void Heat Reclaim Unit casework.

In practice the framework can leak sound which will flank the panels. Therefore the frame must be acoustically insulated to the same standard as the panels.

Standard PVHRU Package Heat Reclaim Units are supplied as standard with galvanised sheet metal outer casework skins for ceiling void mounting, should the air handling units require mounting without a ceiling then plastisol plastic coated sheet steel is available to an approved colour.

It must be noted additional acoustic treatment will normally be applied to the PVHRU air handling unit internal casework to improve the casework sound reduction index and give additional internal absorption.

## Type...

Standard Package Void Heat Reclaim Units have six depths 300mm, 400mm, 450mm, 550mm, 600mm, 750mm which will increase in depth with acoustic enhanced casework class for 30mm and 50mm post frames. Various components within the PVHRU can be selected. The type of component configuration is shown for each type and can be any or all of the components listed. Refer to the selection charts for performance details.

### Type 1

Components available for selection with type 1 Packaged Void Heat Reclaim Units

- Inlet attenuators.
- Inlet/ exhaust air dampers.
- Plate exchanger heat recovery device with face and bypass dampers.
- Panel filters G3/G4 grade on supply and extract.
- Fan selection containing E.C. backward curved plug fan(s).
- Discharge attenuators.

### Type 2

Components available for selection with type 2 Packaged Void Heat Reclaim Units.

- Inlet attenuators.
- Inlet/exhaust dampers.
- Plate exchanger heat recovery device with face and bypass dampers.
- Panel filters G3/G4 grade on supply and extract.
- Electric heater battery.
- LPHW heating coil.
- Fan section containing EC backward curved plug fan(s).
- Discharge attenuators.

## Selection Charts and Graphs...

Selection charts relate to counterflow plate exchangers and their different configuration.

Counterflow plate exchangers have higher energy recovery efficiencies which are reflected in the Performance Charts.

PVHRU Type 1/2 Fan

### Type 3

Components available for selection with type 3 Packaged Void Heat Reclaim Units

- Inlet attenuators.
- inlet air/exhaust air dampers.
- Plate exchanger heat recovery device with face and bypass dampers.
- Panel filters G3/G4 grades.
- Cooling coil - chilled water/direct expansion.
- Electric heater battery.
- LPHW heating coil.
- Fan selection containing E.C. backward curved plug fan(s).
- Discharge attenuators.

### Type 4

Components available for selection with type 4 Packaged Void Heat Reclaim Units.

- Inlet attenuators.
- Fresh air/exhaust air dampers.
- Plate exchanger heat recovery device with face and bypass dampers.
- Panel filters G3/G4 grades.
- Cartridge panel filters grades F5/6/7.
- Electric Heater battery.
- LPHW heating coil.
- Cooling coil- chilled water/direct expansion.
- Fan section containing E.C. backward curved fan(s).
- Discharge attenuators.

## Performance Charts...

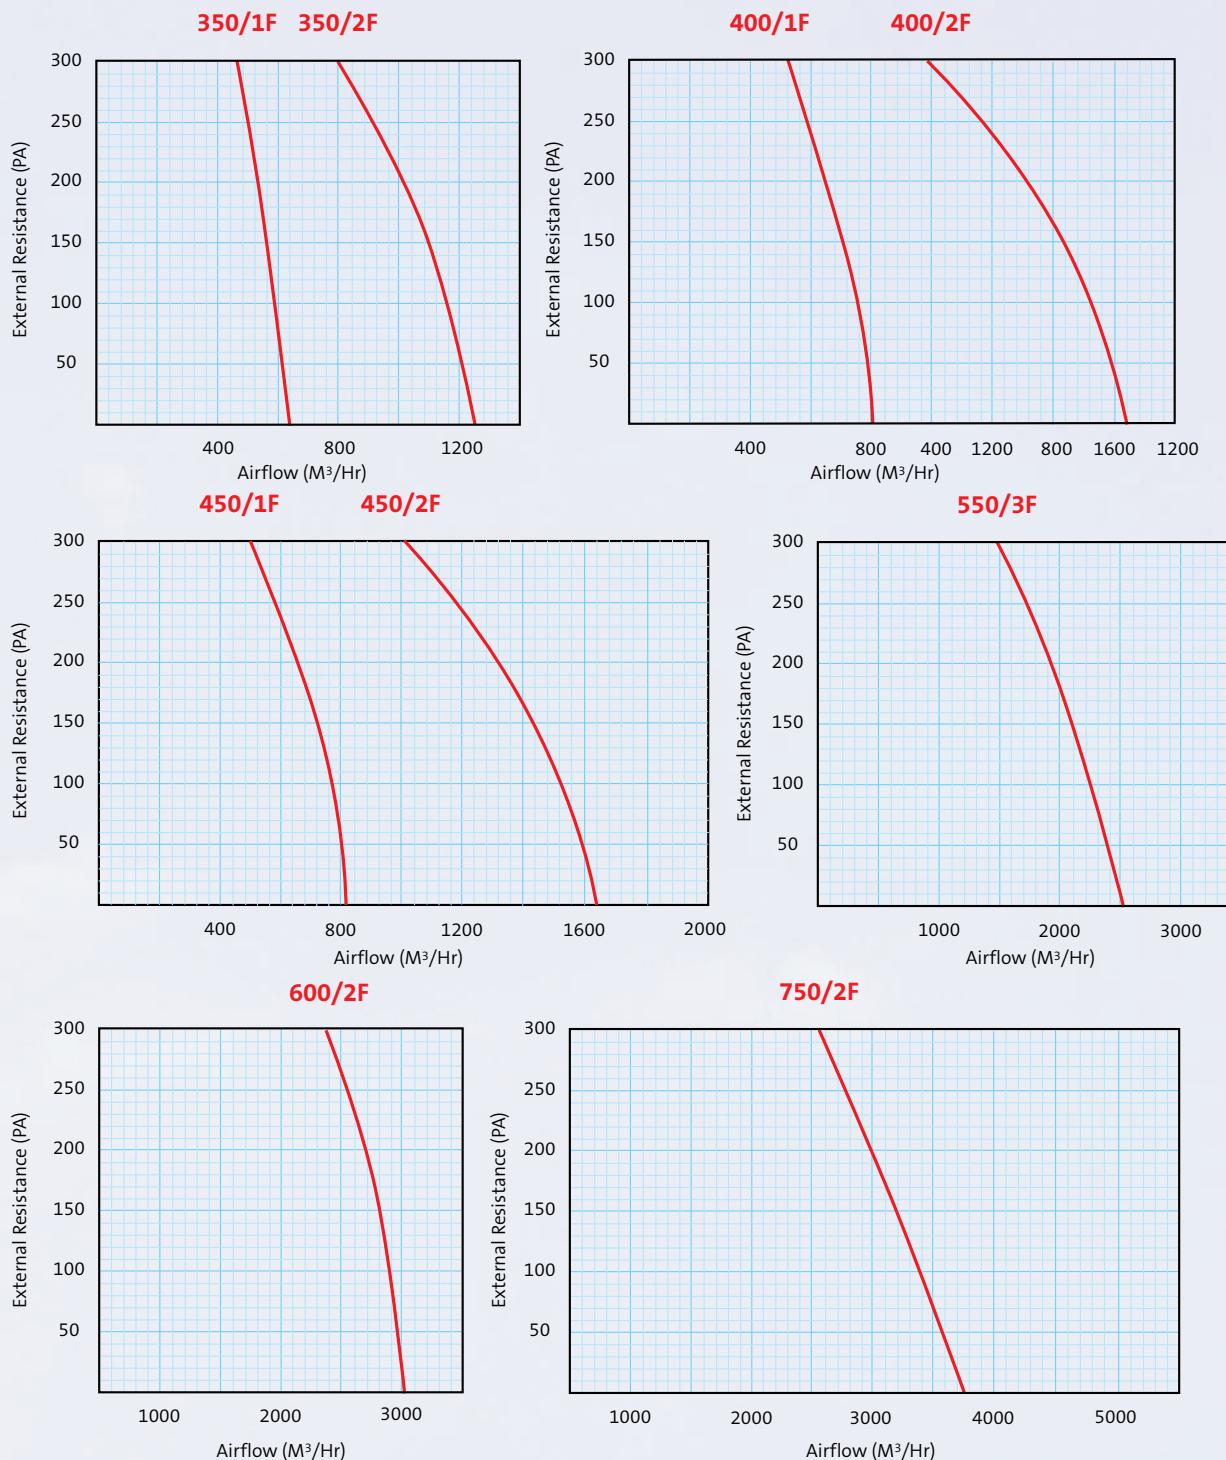

Performance charts relate to each type and size of Package Void Heat Reclaim Units and offer airflow performance, sound and component outputs.

The casework class does not affect the performance values in the selection charts, but will affect the dimensions and weights also the acoustic breakout performance.

## Selection Chart MODEL PVHRU 400/EC 220-163/3 F/COF 35-1300/400 PB 20-18

### TYPE 4 PERFORMANCE TYPICAL TYPE 4 COMPONENT CONFIGURATION

#### Fan Data

Motor output	501 WATTS
Electric supply	240V/1/50
Maximum current rating	3.0 Amps
Maximum Speed	@10Volts 3200 RPM
Control Voltage	0<10 Volts

#### Filter Data

G3 or G4 grade panel filters.

#### Plate Exchanger

Type	Counterflow
Model	COF 35 -1300/400

#### Air Flow Performance

External Pressure Pascals	50	100	150	200
Airflow (m³/Hr)	1500	1320	1170	900
Inlet SWL db	74	75	77	77
Outlet SWL db	78	79	79	80
Absorbed power (Watts)	462	477	540	486

Airflow performance based on maximum speed @ 10 Volts.

#### Electric Heater Data

Based on maximum airflow 10Kw single or three phase electric supply.

#### LPHW Coil Data

Based on maximum airflow and LPHW @ 82/71°C.

Maximum heating output 10Kw.

Chilled water/direct expansion coil data based on maximum airflow & chilled water @ 6/12°C or DX evaporating @ 6°C.

Max cooling output 8Kw.

#### Plate Exchanger Efficiency %

Airflow (m³/Hr)	1500	1320	1170	900
Dry Efficiency	80.2	80.8	81.4	82.7
Wet Efficiency	87.0	87.4	88.0	89.0
Supply Air Lat °C	17.6	17.7	17.8	18.1
Exhaust Air Lat °C	5.9	5.6	5.6	5.4
Energy Recovered (Kw)	11.4	10.1	9.0	7.0

#### EQUAL AIRFLOWS

#### ECO DIRECTIVE ErP 2016/2018 COMPLIANT

Counterflow plate exchanger efficiency based on return air entering at 21°C db/50% relative humidity.

Supply air entering at -5%db/100% relative humidity.

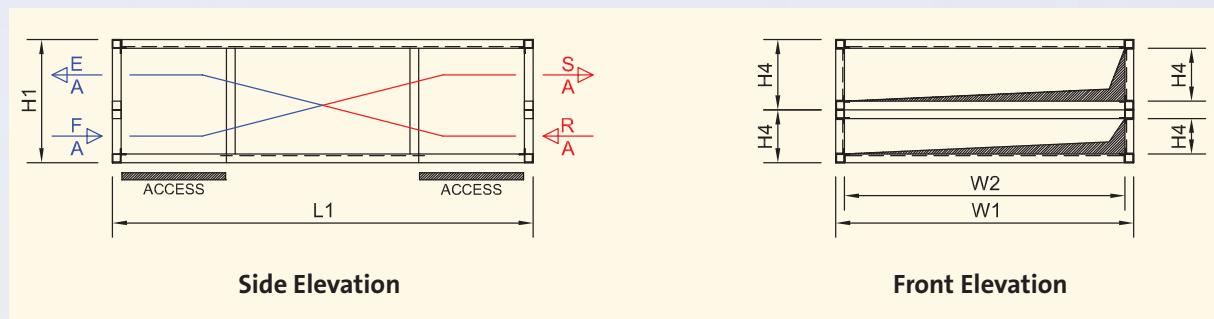

Filter 95mm pleated panel filter pressure drop allowance 200Pa.

## TYPE 4 PERFORMANCE TYPICAL TYPE 4 COMPONENT CONFIGURATION

### Fan Data

Motor output	334 WATTS
Electric supply	240V/1/50
Maximum current rating	2.0 Amps
Maximum Speed	@10Volts 3200 RPM
Control Voltage	0<10 Volts

### Filter Data

G3 or G4 grade panel filters.

### Plate Exchanger

Type	Counterflow
Model	COF 45 -700/250

### Air Flow Performance

External Pressure Pascals	50	100	150	200
Airflow (m³/Hr)	1000	900	800	700
Inlet SWL db	75	77	76	75
Outlet SWL db	79	79	78	77
Absorbed power (Watts)	260	280	290	302

*Airflow performance based on maximum speed @ 10 Volts.*

### Electric Heater Data

Based on maximum airflow 7Kw single or three phase electric supply.

### LPHW Coil Data

Based on maximum airflow and LPHW @ 82/71°C.

Maximum heating output 7Kw.

Chilled water/direct expansion coil data based on maximum airflow & chilled water @ 6/12°C or DX evaporating @ 6°C.

Max cooling output 5Kw.

### Plate Exchanger Efficiency %

Airflow (m³/Hr)	1000	900	800	700
Dry Efficiency	80.3	80.8	81.3	82.0
Wet Efficiency	87.0	87.4	87.9	88.4
Supply Air Lat °C	17.6	17.7	17.8	18.0
Exhaust Air Lat °C	5.9	5.6	5.6	5.6
Energy Recovered (Kw)	7.6	6.9	6.1	5.4

### EQUAL AIRFLOWS

#### ECO DIRECTIVE ErP 2016/2018 COMPLIANT

Counterflow plate exchanger efficiency based on return air entering at 21°C db/50% relative humidity.

Supply air entering at -5%db/100% relative humidity.

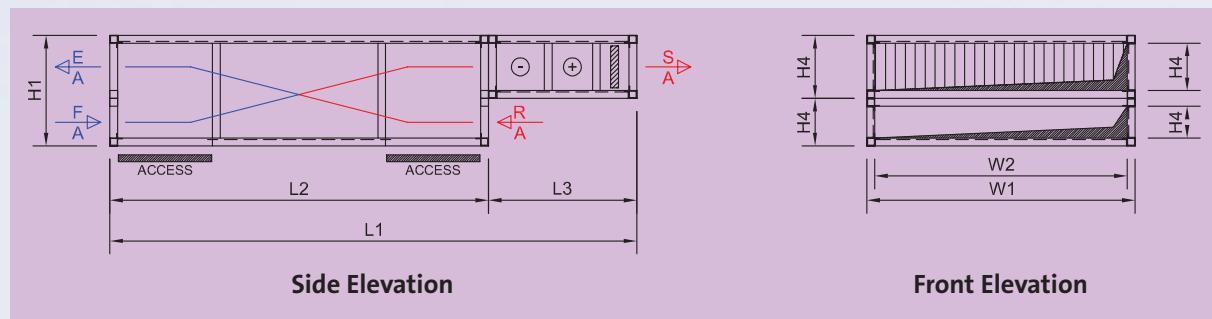

Secondary filter 95mm pleated panel filter pressure drop allowance 200PA.

## Selection Chart MODEL PVHRU 600/EC 310-390/2 F/COF 62-1600/400 PB 20-18

### TYPE 2 PERFORMANCE TYPICAL TYPE 2 COMPONENT CONFIGURATION

#### Fan Data

Motor output	780 WATTS
Electric supply	240V/1/50
Maximum current rating	5.2 Amps
Maximum Speed	@10Volts 2350 RPM
Control Voltage	0<10 Volts

#### Filter Data

G3 or G4 grade panel filters.

#### Plate Exchanger

Type	Counterflow
Model	COF 62 -1600/400

#### Air Flow Performance

External Pressure Pascals	50	100	150	200	250	300
Airflow (m³/Hr)	3000	2900	2800	2700	2600	2400
Inlet SWL db	78	77	77	76	75	74
Outlet SWL db	80	79	78	78	77	76
Absorbed power (Watts)	680	685	690	700	705	710

Airflow performance based on maximum speed @ 10 Volts.

#### Electric Heater Data

Based on maximum airflow 20Kw single or three phase electric supply.

#### LPHW Coil Data

Based on maximum airflow and LPHW @ 82/71°C.

Maximum heating output 20Kw.

#### Plate Exchanger Efficiency %

Airflow (m³/Hr)	3000	2900	2800	2700	2600	2400
Dry Efficiency	82.0	82.1	82.3	82.5	82.7	83.1
Wet Efficiency	88.8	89.0	89.1	89.2	89.4	89.7
Supply Air Lat °C	18.1	18.1	18.2	18.2	18.2	18.3

## Attenuation...

Attenuators provided with the PVHRU Packaged Void Reclaim Unit are duct mounted attenuators for remote mounting, the attenuators shown are standard sizes, but bespoke attenuators can be specifically designed for projects particularly with space restrictions and limitations in noise emission.

As the attenuators are designed for remote location away from the PVHRU unit duct breakout may occur prior to the attenuator, requiring the ducts to be acoustically lagged to prevent breakout noise (this is called noise flanking).

Should you require specific advice on a project with potential noise issues then please contact our sales office on 0161 745 8888.

## Attenuator Performance...

### Attenuator Performance PVHRU 350/EC 190-137/1F

Length (mm)	Insertion Loss db						Pressure Drop (PA)		
	63	125	250	500	1K	2K	4K	8K	
600	-7	-13	-24	-33	-42	-42	-42	-32	19

	1650	450	1800	185

## Controls and Wiring...

PVHRU Units can incorporate a factory fitted and prewired controls package with an on board control panel offering the following features:

- 240/1/50 circuit protection.
- Control panel door isolation.
- Trend/Carel or similar controller.
- Temperature sensors, supply/return, frost.
- Pressure switches for filter condition.
- Remote or time clock enable.
- LPHW or chilled water control valves.
- Shut off and face/bypass damper actuators.

### Controls options:

- CO2 sensing.
- PIR activation.
- Electric heater battery/thyristor controller.
- Fan run on timer and airflow proving circuit (both are statutory requirements for electric heater protection).
- Remote access.

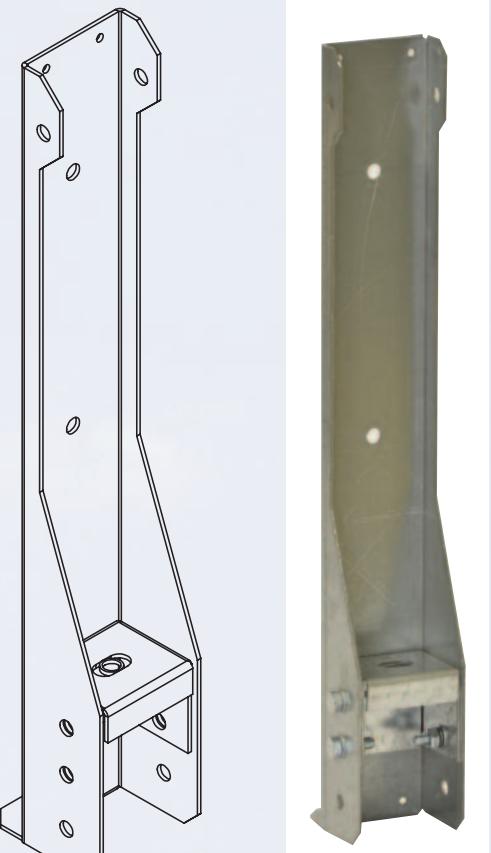

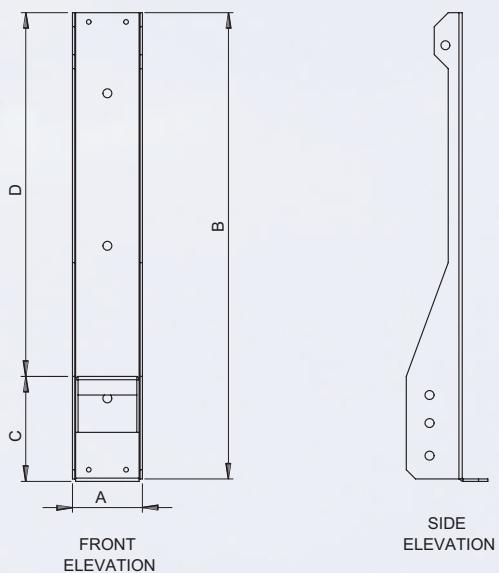

## Mounting Arrangements...

PVHRU Quiet units have a variety of mounting arrangements, which are outlined below.

### Suspension Brackets

Designed for use on internal ceiling mounted units, the brackets are contained within the depth of the unit casework for drop rod suspension.

The quality of suspension brackets will depend on the size and weight of the PVHRU Quiet Units including any attenuators attached.

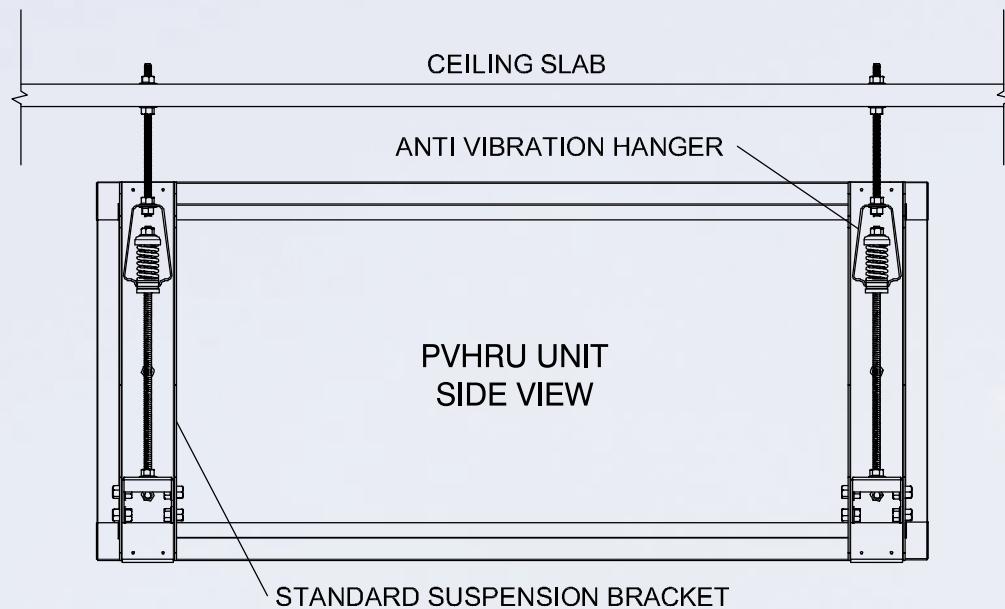

### Constructed from galvanised sheet steel

DIMENSIONS MM	A	B	C	D	E	F	G	H	Hole Size Slotted	Weight Each Kg

## Vibration Control for Suspended PVHRU Units

Where packaged void heat reclaim units are suspended from the ceiling slab etc, then we can provide a range of neoprene or spring anti vibration control hangers as detailed below.

## Vibration Hangers with Suspension Brackets

The application for this type of vibration isolation is where the PVHRU unit is suspended from the ceiling via drop rods.

### Type of Isolator

Both neoprene and spring isolators can be selected with this application, depending on the degree of vibration isolation required.

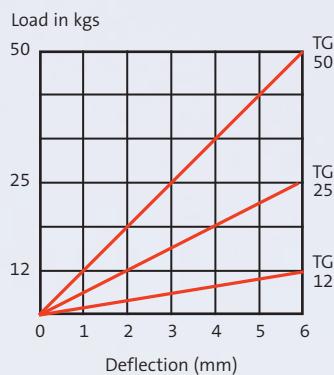

### Open Rubber Hanger - Series TG

The TG series has different modules, each of which is indicated for a specific application, depending on the weight to be supported and the disturbance frequency it generates. The TG series is made from rubber. We recommend studying their physical analysis to check which is the most appropriate size, depending on the application.

The most important benefits of this product are its toughness, easy assembly and economy, which make them a favourite product of acoustic and air conditioning installation technicians.

## Performance Curves

## Physical Analysis

### TG Vibration Absorbers

MODEL	Max load Kgs	Deflection mm	Frequency Hz
TG-12	12	6	7
TG-25	25	6	7
TG-50	50	6	7

## Open Spring Hanger - Series TM 5/25

The TM 5/125 Series are Metal Spring Isolators, ideal for suspending machinery from the ceiling or a metal structure. Highly suitable for very lightweight equipment situated in critical areas with a low cycle operating system (over 600 rpm).

## Performance Curves Information

### Components Description

1. Standardised, high resistance steel spring.
2. Cylindrical metal bushes, which protect the outside of the spring at its upper end. Because of its particular geometry, the attachment nut is connected the opposite way to the traditional system of similar products, providing maximum security.
3. Cylindrical rubber bushes for connecting the spring to the metal case preventing contact.
4. Extremely secure metal casing, superior to other similar products, formed via a process of bending and welding.

## Physical Analysis

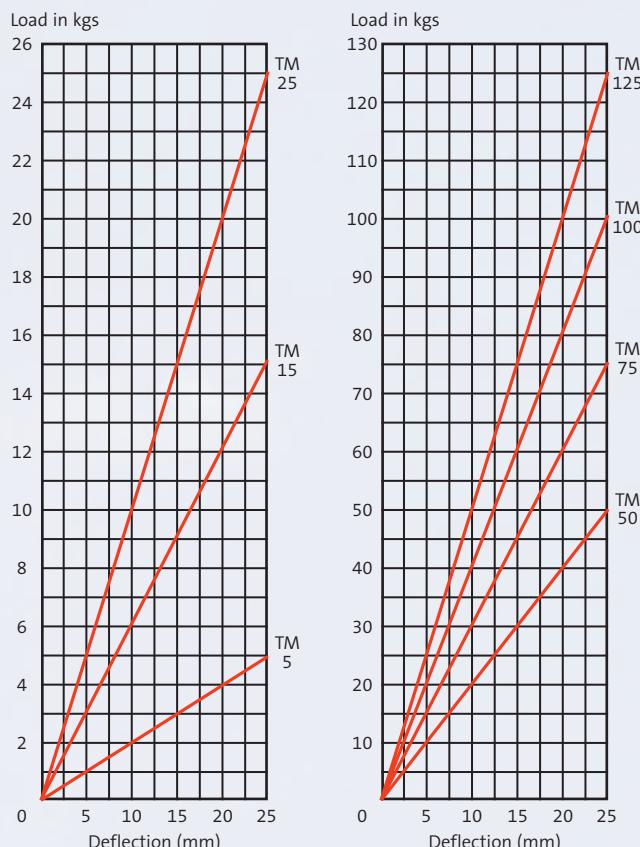

### TM Spring Absorbers

#### Standardised Load at Minimum and Maximum Compression

MODEL	Min Load Kgs	Deflection mm	Max Load Kgs	Deflection mm	Stiffness Kgs/mms	Admissible Temporary Overload as a %

TM 100	40	10	100	25	4	10%
TM 125	50	10	125	25	5	10%

5. Extremely secure Metal Casing, superior to other similar products, formed via a process of bending with one single connection point made with a bead of welding.

## Performance Curves

1. Working temperature range: -90°C to 200°C

2. Lateral to Axial Stiffness Ratio: 1

3. For studies requiring a maximum adjustment of the compression deflection and load: please consult our technical department.

## Open Spring Hanger - Series TM 150/450

The TM150/450 comprises Metal Spring Isolators especially designed for suspending machinery and ductwork from the ceiling or from a metal structure. Highly suitable for all kinds of machinery with a low cycle operating system (above 600 rpm).

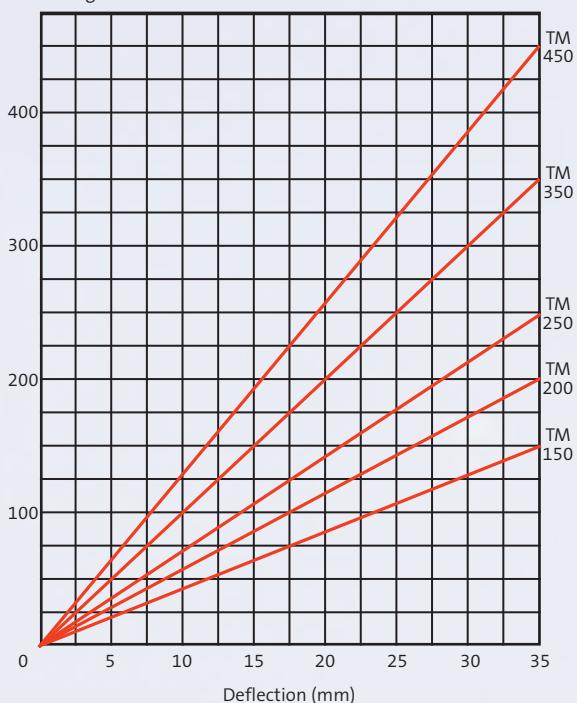

### Performance Curves Information

#### Components Description

1. Standardised, high resistance steel spring.
2. Cylindrical metal bushes, which protect the outside of the spring at its upper end. Because of its particular geometry, the attachment nut is connected the opposite way to the traditional system of similar products, providing maximum security.
3. Cylindrical rubber bushes for connecting the spring to the metal case preventing contact.
4. Extremely secure metal casing, superior to other similar products, formed via a process of bending and welding.

# PVU Quiet Packaged Void Unit

## PVU Ceiling Void Units

### Benefits

- A range of units for ceiling void application.
- Available with volumes up to 1.4m<sup>3</sup>/s.
- Includes a complete range of plate heat exchangers, cooling, heating, direct driven fans and air-handling functions.
- Low breakout casework available.
- Low profile units of 300mm high up to 0.8m<sup>3</sup>/s.

low Profile Unit

## Series VSI/VTI Single & Twin Low Profile Quiet Extract Fan Units

Single Fan Series VSI

### Benefits

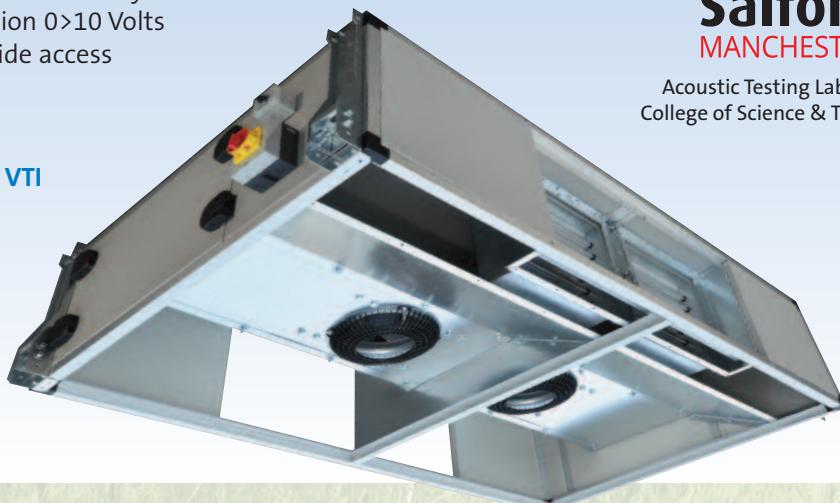

- Low SFP
- Tonal noise control
- Matching attenuators
- Weatherproof options
- Low noise breakout
- Meets BB 93 Feb 2015
- High sound reduction casework tested to BS EN ISO 10140-2 (2010)
- Backward curved, low speed, EC fans
- Attenuators/cowls and acoustic louvre options
- Auto change over control system for duty and stand by operation on VTI units
- Suspension brackets with vibration control available
- Fan motor isolators fitted as standard
- Variable volume control system - Vari Vol
- Speed regulation 0>10 Volts
- Bottom and side access

University of  
**Salford**  
MANCHESTER

Acoustic Testing Laboratory  
College of Science & Technology

Twin Fan Series VTI

# Classvent Quiet

**Low Noise Breakout with  
Optional Cooling to meet BB93  
Feb 2015 and TM52 Specifications**

## Benefits

- TM 52 Compliant
- BB93 Feb 2015 Compliant
- Low Noise Boost for CO<sub>2</sub> Control
- Trend Controllers Fitted
- Fully Integrated with BMS Time Scheduling and Fault Indication
- Reduced Volume with No Room Occupancy
- Manual Boost Override
- Room Minimum Setback Temperature
- Frost Protection
- Acoustic Internal Sound Absorbers
- High Sound Reduction Casework Tested to BS EN ISO 10140.2 (2010)

**University of  
Salford  
MANCHESTER**

- PIR Sensing
- CO<sub>2</sub> Sensing
- Low Speed Fans
- Tonal Noise Control
- Summer By Pass
- Cooling Coil Options
- High Efficiency Recuperators
- Attenuators Matched to Classvent
- Integral Multi Port Valve Unit with Balancing Terminal, Flushing By Pass, Fixed Orifice Commissioning Valve

**NO NEED FOR AN ADDITIONAL ACOUSTIC ENCLOSURE**

# Envirofresh 70 Quiet

**Low Energy, Air Source Heat Pump System,  
Silenced with Acoustic Treatment as  
used in Hundreds of Projects**

**Out  
Performs**

## Envirofresh 70 Quiet

## Benefits

- Meets TM52 for Schools
- Meets BB93 Feb 2015
- Renewable Energy Source
- BMS Controls Installed in Unit
- Factory Pre-Commissioned
- Heating and Cooling from One Source
- 50% Less CO<sub>2</sub> Production than a Gas Boiler
- Low Energy Consumption
- Reduced Site Installation Cost
- No External Condensing Units, Pipework or wiring
- Low Noise Emissions with Silenced Compressors
- High Specification UKAS Certified Low Breakout Casework
- No Loss of Heating Capacity at Low Temperatures
- Room Heating and Cooling available at Reduced Air Volumes
- Tempered Air Supply without Defrosting
- No Increase in Footprint over Standard AHUs
- More Pleasant External Appearance than Condensing Unit or Chiller Installations

**University of  
Salford  
MANCHESTER**

**BSRIA**

# Ecodesign Directive

## The Facts...

### REASONS

Ecodesign directive is integral to the European Union's commitment to reaching a 20% reduction in greenhouse gas emissions and energy consumption by 2020.

### DIRECTIVES

Energy related products (ErP) Directive 2009/125/EC offers guidance on the use of energy related products and continued efficiency improvement to them.

The ErP Directive comes into force by law (2015 No 469) on 1st January 2016.

### ECODESIGN DIRECTIVE LOT 6

Relates to the minimum performance requirements for ventilation products and is included in part L building regulations.

### CHANGES

The changes apply to both residential and non-residential ventilation units.

Residential ventilation units with a maximum airflow of more than 250 m<sup>3</sup>/H and in the case of residential ventilation units exclusively intended for residential use only ventilation 250-1000m<sup>3</sup>/H maximum airflow.

Non-residential ventilation units with bidirectional airflow having supply and exhaust air fans, more than 250m<sup>3</sup>/H.

### PLATE EXCHANGERS

Minimum efficiency 73% from 01/01/2018

**NOTE 1** The efficiency is based on balanced air flows.

**NOTE 2** Plate exchanger heat recovery devices must have a thermal bypass facility.

### RUN AROUND COIL SYSTEM

Minimum efficiency 63% from 01/01/2016

Minimum efficiency 68% from 01/01/2018

### EXEMPTIONS

- Agricultural applications.
- Professional kitchens.
- Machine exhaust.
- Paper production, foundries, heat dissipation applications.

- Air Handling Units exclusively working with recirculating air.
- Unit which include a heat exchanger and a heat pump for heat recovery (EU No 1253/2014 article 1.1(g)).  
This does not constitute Air Handling Units with a direct expansion heating/cooling heat pump coil with external heat pump condensing unit.
- Bidirectional unit with a total electric power input less than 30W.
- Atex see directive 94/9/EC.
- Unit specifically for operating for emergency use and for short periods of time (i.e. fire or smoke evacuation units)  
see regulation (EU No 305/2011).
- Motors out of Airstream with operating temperatures in excess of 65°C or lower than -40°C.
- Toxic, highly corrosive or flammable environments or if in contact with abrasive substances.
- Process ventilation applications as below:
  - Swimming pools
  - Data centres/server rooms
  - Machine exhaust systems
  - Only a fan with housing (regulation 327/2011)
  - Units working with moved air temperature 100°C or -40°C
- Air Handling Units Supplied to Non European Union Member Countries.

### NOTES

- Mixing boxes on their own do not constitute heat recovery.
- Air Handling Units containing a heat pump heating/cooling connected to a remote heat pump condensing unit are not exempt and are to be included.

### DECLARATION OF PERFORMANCE

For all residential ventilation units it is mandatory to carry a Declaration Of Performance (DOP) energy label (1253/2014).

It is however not mandatory for non-residential ventilation units, as the manufacturer furnishes the mechanical services designer with information on ErP compliance.

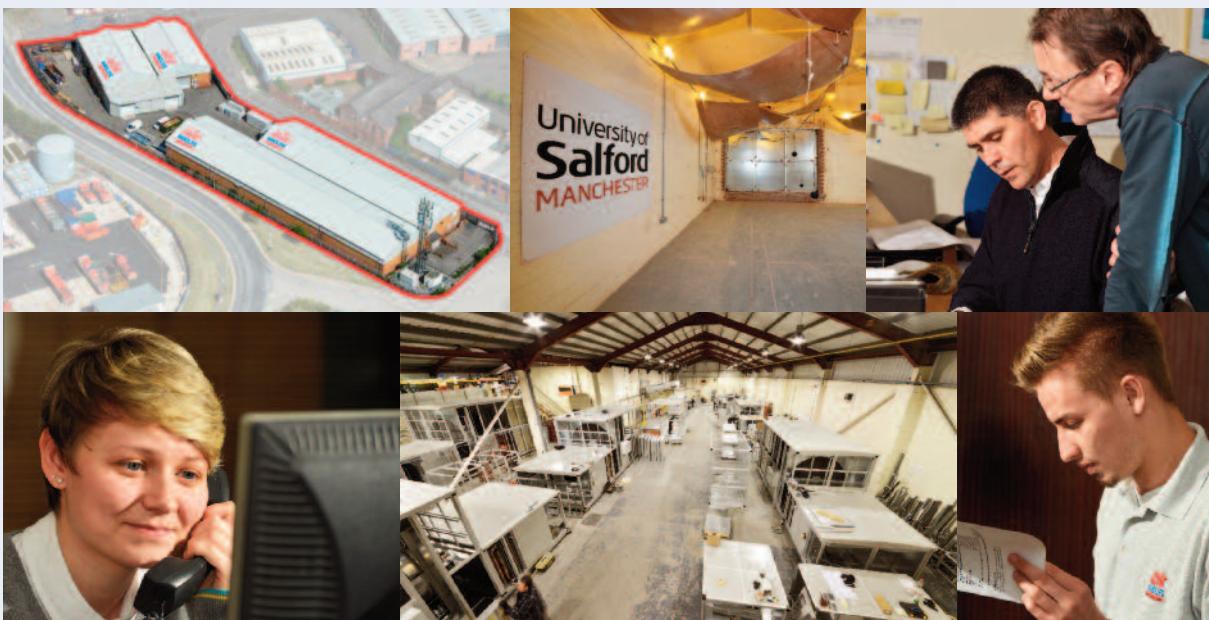

# PVHRU Max Quiet Packaged Void Heat Reclaim Units

## Product Range...

- Single Cased Extract Unit VSI
- Twin Fan Extract Units VTI and ITU
- Classvent Units
- Packaged Void Units PVU
- Vertical Air Handling Units
- AH Series Modular AHU's
- IDG Series Indirect Gas Fired AHU's
- DG Series Direct Gas Fired AHU's
- HOSP Health Care Specification Hygiene AHU's
- AHW Welded Frame and Stainless Units
- TWHR Heat Reclaim AHU's containing Thermal Wheels
- AHR Heat Recovery AHU's containing Recuperators
- Freshcool Cooling only Packaged Units
- Envirofresh Packaged Heat Pump Units
- Attenuators and Anti-vibration Mounts
- Acoustic Enclosures and Screens
- Flat Pack Build and Refurbishment
- Planned Maintenance and Site Repairs
- Airflow/Acoustic/Leakage Performance Testing Facility

## Other Associated Literature...
